

Palmer Summer Reading Program

Reading Log

Help the bee fill up the hive with honey!
Each honeycomb piece is equal to 30 minutes of reading!
Every hour you read, you earn a chance for the prize(s) of your choice!

The reading log is a large honeycomb grid composed of 108 hexagonal cells, each containing the number '30'. The grid is arranged in a series of rows that form a large, irregular shape. The grid is divided into sections by dashed lines, with hour markers indicating the total reading time for each section:

- Top section: 5 hours
- Middle section: 15 hours
- Bottom section: 20 hours
- Bottom-right section: 10 hours
- Bottom-most section: 25 hours

Decorative elements include several bees and flowers scattered around the grid. A dashed line starts from the bottom left and ends near the center of the grid. A beehive is located at the bottom right corner.
