

3D PAPER BUTTERFLY

3D Butterfly Folded Paper Craft – Materials

- 2 Square pieces of origami paper
- Black origami paper (for the paper butterfly's body)
- glue
- Scissors

How to make a 3d butterfly out of paper step by step

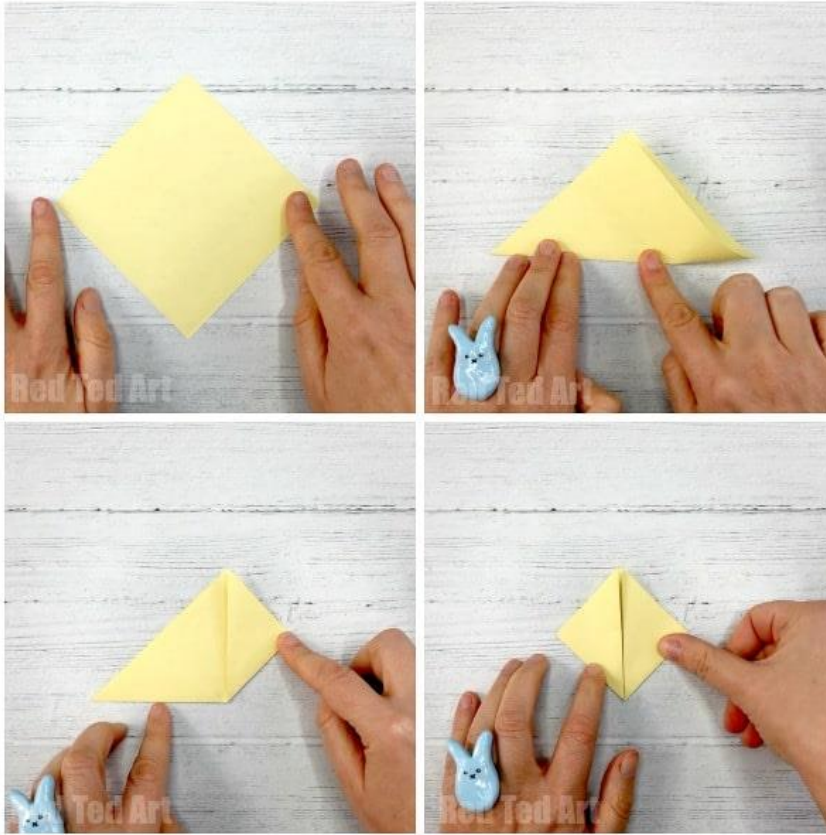

Making your Folded Paper Butterfly Wing

Fold your square paper diagonally, so you end up with a triangle.

Turn the triangle so that the long straight edge at the bottom.

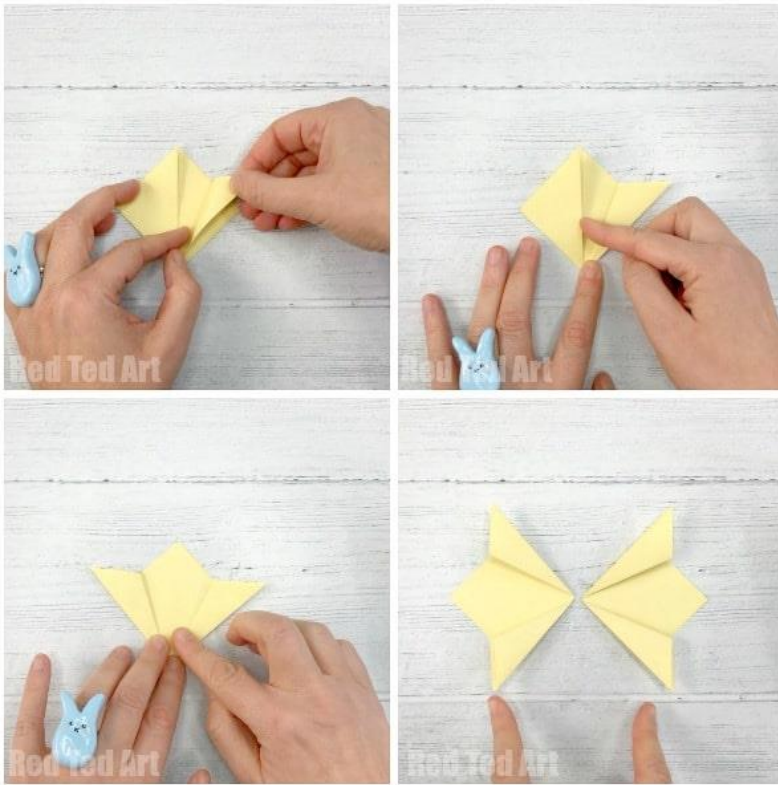

Fold the right hand point up towards the top point. So you create a perpendicular down the centre.

Repeat with the left hand point.

You should now have a smaller square in front of you (turned into a diamond) – this is in fact also the beginning to our [origami paper bookmark!!](#)).

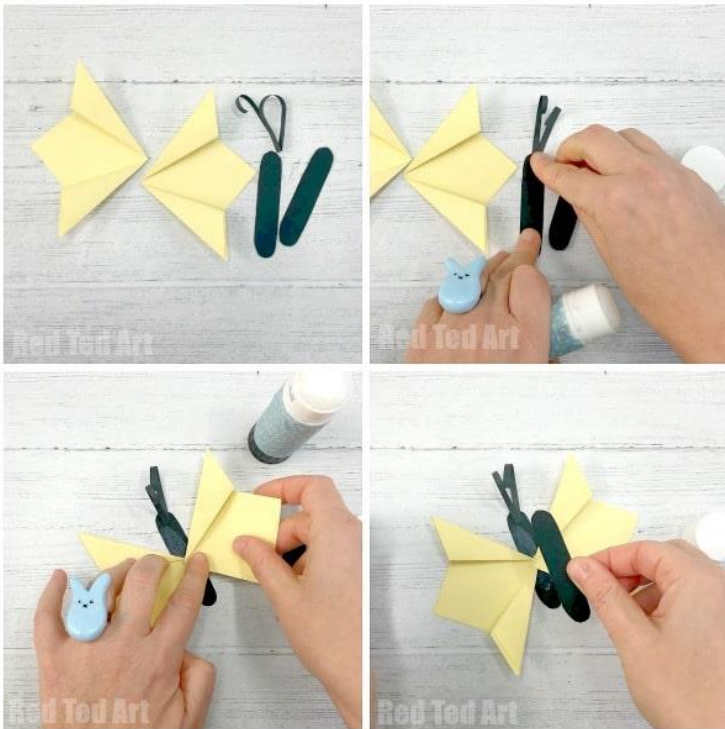

Now bring down the top right folded point and align it with the edge of the diamond. Make a neat crease.

Repeat for the left-hand side.

You have just completed one butterfly wing! Make two of these!

The Folder Paper Butterfly's Body

Cut out 2 pieces of black paper for the folded paper butterfly's body – approximately 1cm wide and 6cm long is nice. But it is a question of preference.

Also a thin black strip of paper (2mm x 10cm). Folded in half and with the tops curled for the paper butterfly's antennae.

Assembling your folder Paper Butterfly

Glue the antennae to the base of the first body piece.

Glue on both wings.

Add glue to the second body piece and place on top of the first part.

Your Folded Paper Butterfly Craft is finished!
